

WORLD LEADER IN HELICAL PILES

DO IT LIKE THE PROS

« Techno Metal Post has revolutionized deck building for me. The ability to set the steel piles and build in the same day greatly increases production. Add to the fact that I'm saving huge bucks in labour by not having to remove displaced earth, haul concrete, and clean up the mess, this makes Techno Metal Post the only way to begin a deck project. »

Paul Lafrance, HGTV

 **Techno Metal Post helical piles are engineered and guaranteed.**

THE SOLUTION FOR YOUR DECK

- Ready to build
- No excavation
- Environmentally friendly
- Specialized installation equipment
- In-house engineering services

THE SOLUTION FOR YOUR DECK

A solid foundation is necessary for the construction of a deck. Our system saves time and is capable of supporting heavier loads, such as multiple levels, a hot tub, or even a roof.

Our helical piles are designed, engineered, and tested to ensure the highest quality and standards. This guarantees that they will support heavy loads in various soil conditions.

Our exclusive green sleeve is slid on to the pile during installation. Throughout the frost/thaw cycles, the sleeve slides along the pile following the soil movement. The pile will not move, ensuring the stability of the structure.

Our Engineering Department will review, analyze, and certify your projects. Our engineers determine which pile size is appropriate, depending on the structure, load requirements, and soil type.

Our installation equipment is created to maneuver around very narrow spaces. Therefore, it is easy to install piles close to pools, gardens, and other existing decks or patios without any disruption to your yard.
